The armature (also known as the  
"rotor") is a small bearing-like piece in  
the center of the motor construction.

When it receives the magnetic force of  
the stator and windings, it spins,

Alternating Current And Repair  
Of Motors And Generators in  
India

Armature winding can be defined as, an electrical machine in which emf can be generated because of the air gap field flux. It must be noted that the air gap is produced because of the DC current flow in the winding. In general, this winding is housed on slots of the stator & the field winding on rotor slots.
