Geoarchaeology is a multi-disciplinary approach which uses the techniques and subject matter of geography, geology, geophysics and other Earth sciences to examine topics which inform archaeological knowledge and thought. Geoarchaeologists study the natural physical processes that affect archaeological sites such as geomorphology, the formation of sites through geological processes and the effects on buried sites and artifacts post-deposition. Geoarchaeologists' work frequently involves studying

Geoarchaeology - Wikipedia

Geologists and archaeologists alike have noted that the earth is made up of layers of rock and soil that were created by natural occurrences—the deaths of animals and climatic events such as floods, glaciers, and volcanic eruptions—and by cultural ones such as midden(trash) deposits and building events.

Stratigraphy: Earth's Geological, Archaeological Layers

Archeologists are anthropologists, meaning they study people, but they are not geologists (who study rocks and minerals) or paleontologists (who study very ancient reptiles). Archeologists look at old things and sites to investigate how people lived in the past.

NPS Archeology Program: Archeology for Kids

In short, archaeology is dependent on geology. The longer answer is that geological principles and methods are at the very core of archaeological site interpretation methodologies, they are the foundation really.

How is geology used in archaeology and what are some ...

e Archaeology, or archeology, is the study of human activity through the recovery and analysis of material culture. The archaeological record consists of artifacts, architecture, biofacts or ecofacts and cultural landscapes. Archaeology can be considered both a social science and a branch of the humanities.
