An Aboveground Storage Tank (AST) Facility or tank farm consists of tanks (including day tanks), piping, secondary containment and ancillary equipment. These facilities are used to store fuel that will be dispensed at the site, delivered elsewhere, or transferred to other locations such as day tanks.

## **Aboveground Storage Tank Operator Handbook**

There are several types of storage tanks, e.g., above-ground, flat-bottomed, cylindrical tanks for the storage of refrigerated liquefied gases, petroleum, etc., steel or concrete silos for the storage of coke, coal, grains, etc., steel, aluminium, concrete or FRP tanks including elevated tanks for the storage of water, spherical tanks (pressure vessels) for the storage of high pressure liquefied gases, and under-ground tanks for the storage of water and oil.

Approximately 542,000 underground storage tanks (USTs) nationwide store petroleum or hazardous substances. The greatest potential threat from a leaking UST is contamination of groundwater, the source of drinking water for nearly half of all Americans. EPA, states, territories, and tribes work in partnership with industry to protect the environment and human health from potential releases.
